

I-VALO VEGA B600

FLOODLIGHT BRACKET

I-VALO VEGA product line consists of various lighting, control and fixing modules for construction of tailor-made lighting solutions. The modular design enables **VEGA** to offer a myriad of different lighting options, all of which are characterized by sustainability and energy efficiency. **VEGA** fixing module **B600** offers several different installation possibilities making **VEGA** remarkably versatile luminaire!

12KG **RAL 7047**

B600 fixing module is suitable for installing and inclining models **VEGA W** and **VEGA S**. The module is made of polyester coated (RAL 7047) galvanized steel so the structure is extremely firm and endures harsh ambient conditions well. Please note, that in outdoor applications, use **VEGA** model equipped with a Goretex filter. Goretex filter withstands humidity better than a regular filter.

With **B600** the luminaire can be rotated in relation to two axes: rotation with 0°/22,5°/45°...360° and inclination with 0° / 22,5° / 45°... 135°. Installation is made very easy, the mounting plate is installed first either to a ceiling or to a wall and then the actual fixing bracket is installed to the plate. After that it is easy to lift the control and light modules on place. In case it is not necessary to rotate the luminaire, the fixing bracket can also be installed directly onto the ceiling/wall. Easy installation means both mounting and maintenance savings!

Weight of the bracket is 12 kg, total weight of **VEGA S** equipped with B600 is 23,2 kg.
